NOTE BY THE DIRECTOR OF THE CENSUS.

The data presented herewith, relating to the farm population of eight selected counties, classified by sex, age, race and nativity, tenure group, residence, illiteracy, school attendance, marital condition, etc., are the result of a special tabulation of the 1920 schedules for population, made, under the supervision of the Bureau of the Census, by the Division of Farm Population and Rural Life, Bureau of Agricultural Economics, Department of Agriculture. The tabulation was planned and initiated by Dr. C. J. Galpin, economist in charge of the Division of Farm Population and Rural Life, and carried out under the direction of Miss Veda B. Larson, junior economist in the same division. The major part of the introductory text was written by Mr. Leon E. Truesdell, of the Bureau of the Census, who is also responsible for the form and arrangement of the tables.

DETAILED TABLES FOR INDIVIDUAL COUNTIES.

The complete series of 30 tables is presented for each county. Pages are indicated for the several counties by initial letters, as follows:

O—Otsego County, N. Y.
D—Dane County, Wis.
N—New Madrid County, Mo.
S—Scott County, Mo.

C—Cass County, N. Dak.
W—Wake County, N. C.
E—Ellis County, Tex.
K—King County, Wash.

28.—Farm population—Children 10 to 17 years of age gainfully employed, by occupation and sex, classified also by tenure group, by residence, by color and nativity, by age, and by school attendance.....	O-47; D-74; N-101; S-128; C-155; W-182; E-209; K-236
29.—Farm population—Children 10 to 17 years of age gainfully employed, by general occupation group and sex, classified also by tenure group, by residence, and by color and nativity.....	O-48; D-75; N-102; S-129; C-156; W-183; E-210; K-237
30.—Farm laborers (occupation classification) by sex, classified also by marital condition, by relation to family, by age, and by place of employment.	O-49; D-76; N-103; S-130; C-157; W-184; E-211; K-238

DEFINITIONS AND EXPLANATIONS.

INTRODUCTION.—The farm population data presented in the following pages are the result of a special tabulation for eight selected counties, made from the 1920 census schedules, under the supervision of the Census Bureau, by the Division of Farm Population and Rural Life, Bureau of Agricultural Economics, Department of Agriculture. This special tabulation, which shows the composition, characteristics, and occupations of the farm population, in considerable detail, was intended to supplement the less detailed tabulation of the farm population of the whole country, by States,¹ which was made by the Census Bureau, and to afford an example of what could be done with the farm population data for individual counties.

The counties were selected as being representative (so far as this was possible with so small a number) of different geographic locations, different types of agriculture, different farm tenure conditions, the presence or absence of cities, etc., and also with regard to previous economic or social studies. The list of counties is as follows:

Otsego County, N. Y.	Cass County, N. Dak.
Dane County, Wis.	Wake County, N. C.
New Madrid County, Mo.	Ellis County, Tex.
Scott County, Mo.	King County, Wash.

DEFINITION OF FARM POPULATION.—It might seem, at first thought, that the farm population would need no definition—that it would include simply those persons who lived on farms and no others. A brief survey of the situation shows, however, that there are considerable numbers of persons who are engaged in farming or in some agricultural occupation, but who for some reason do not live on a farm. It is evident, when this group of persons is considered, that they, or at least the major part of them, together with their dependent families, might reasonably be included in the farm population, along with those persons who actually live on farms. Hence the farm population, as defined for use in the tabulation of the eight selected counties, includes two groups of persons, follows:

1. All persons living on farms, without regard to occupation.
2. All persons engaged in agricultural occupations, but not living on farms, together with their family-households,² if any.

¹ See chapter 14, Vol. V, Reports of the Fourteenth Census, in which these figures are published, with classification by sex, by race, nativity, and parentage, and by broad age groups (under 10 years, 10 to 20 years, and 21 years and over). This chapter has been reprinted separately, and can be obtained in this form from the Bureau of the Census, Washington, D. C.

² The "family-household" includes only those persons living in the household who are members of the family or dependents, thus excluding boarders, hired help, and occasional other persons living with the family, who would be included in the term "household."

This definition is somewhat more inclusive than that used in the tabulation of the farm population of the United States, by States, which comprised the following groups:

1-a. All persons living on farms, without regard to occupation.

2-a. All those farm laborers (and their families) who, while not living on farms, nevertheless live in strictly rural territory, outside the limits of any incorporated place.

The extent of the difference between these two definitions of the farm population can be definitely measured through the use of the county figures classified by residence. The total farm population of the eight counties includes 169,904 classified as living "on farms" and 18,381, or 9.8 per cent of the total, "not on farms." The 169,904 persons classified as living on farms represent approximately what would have been obtained as the farm population of the eight counties, if the counties had been tabulated separately under the definition used in the State tabulation.

Nominally, one would expect allowance to be made for the farm laborers (and their families) included in the farm population of the States, though not actually living on farms, who comprise group 2-a, as outlined above. As a matter of fact, it was found necessary, as explained below under the heading "Residence," to count all of these persons as living "on farms." Hence group 2-a is already included, together with group 1-a, in the 169,904 persons classified as living on farms.

The figures for the farm population of the individual counties, classified by residence, are given in Summary Table V.

TENURE GROUPS.—The farm population of the eight counties is classified into four tenure groups, as follows, with a residual group for those persons whose tenure was not reported.

Farm owner population comprises all persons living in the households³ of farm owners, *except* hired laborers. Members of the family who work for wages on other farms, but live at home, are included here and *not* in the farm laborer population. Farm operators who own a part of the land which they operate and hire a part are classified as farm owners and not as farm tenants.

Farm tenant population comprises all persons living in the households³ of farm tenants, *except* hired laborers. Members of the family who work for wages on other farms, but live at home, are classified here and *not* in the farm laborer population.

Farm manager population comprises all farm managers who are not members of any other farm operator's household, together with all members of these managers' households,³ *except* hired laborers. Members of the family who work for wages on other farms, but live at home, are classified here and *not* in the farm laborer population.

Farm laborer population comprises all hired laborers, male and

³ For families not living on farms, the family-household, including only members of the family and dependents living in the household, is the basis of the classification, rather than the household, which includes all persons living with the family, whether members or dependents, or otherwise.

female (including both farm and household laborers), employed on owners,' tenants,' and managers' farms and living either in the employers' households or elsewhere, together with the members of the laborer's household,³ where he is the head (or the financial supporter) of a family. The farm laborer population, then, includes individuals living in the households of employing farm operators, individuals living in nonfarm families, and persons maintaining households of their own, together with all members of such households.

It should be borne in mind that the 1920 census was taken in the month of January. This fact has an important bearing on the number and the residence of the farm laborers enumerated, since many persons who work on farms during the crop season go to some city or town or to a lumber or mining camp for the winter. Some of these obviously enter other occupations and are lost to the farm laborer enumeration when the enumeration is made in the winter. Others, while reporting their occupation as "farm laborer," appear on the 1920 census schedules as living in the town or city where they happened to be in January. Undoubtedly also some farm laborers go to the home farm for the winter, and, though properly reporting the occupation of farm laborer, are classified in the tenure group (owner, tenant, or manager) of their own family rather than as a part of the farm laborer population.

RESIDENCE.—Farm people in the United States usually live on farms, but not always. This fact has already been mentioned, in connection with the general definition, where the farm population is described as made up of two distinct groups—those who are included because they live on farms and those who, while they do not live on farms, are included because they are engaged in some agricultural occupation (or are members of a family whose head is so engaged). One significant classification of the total farm population, then, is that which separates these two groups—those who live on farms and those who do not live on farms.

Special note should be made of the fact, however, that the farm laborer population classified as "on farms" includes a certain number given the "farm" designation on the population schedules in accordance with the following item in the instructions to the census enumerator:

"*Fm*" is also to be entered for the house of a farm laborer and his family living on a small parcel of land *not* within the limits of an incorporated place.

It was not found practicable to go back of this designation (made by the enumerator in the field) to determine and reclassify the cases where the entry, "*Fm*," for a farm laborer's family, did not signify actual residence on a farm.

Another important classification on the basis of residence separates those who live within the limits of some incorporated place from those who live in unincorporated territory. Since many farms are located within the corporate limits of villages, towns, and cities, the farm popu-

See footnote on p. 10.

lation living in incorporated places includes persons who live on farms as well as persons who are engaged in farming activities, but do not live on farms. The class is subdivided on this basis; and the second of the subdivisions—the one comprising persons living in incorporated places, not on farms—is perhaps of the greater significance, including, as it does, the farmer who lives in town and goes out to his farm to do the necessary work or give the necessary supervision, as the case may be, and the farm laborers who live in near-by towns rather than on the farms where they work.

The farm population living outside the boundaries of any incorporated place makes up, of course, the great bulk of the total farm population. This group also is subdivided so as to show separately those living on farms and those not living on farms. The first of these two subdivisions is by far the larger, making up as it does from 71.6 to 92.9 per cent of the total farm population of the several counties; but considerable significance nevertheless attaches to the group made up of persons engaged in farm occupations and living on small places in the open country, not large enough to be called farms, or in unincorporated villages.

To recapitulate: The classification of the farm population of the eight counties according to residence comprises, first, the separation of the whole farm population into two groups, as living on farms or not on farms; second, the division of the whole farm population in another way, as living outside incorporated places or inside incorporated places; and, third, the subdivision of the groups of the second classification in accordance with the first.

COLOR OR RACE AND NATIVITY.—The classification of the farm population according to color or race and nativity is largely self-explanatory, the groupings being those which have already become familiar in the census statistics of general population and of farm operators. The white farm population is divided into two classes, native and foreign born, and the native white group is further subdivided (in Table 19) according to parentage, as that of native parentage, foreign parentage, and mixed parentage. The foreign-born white farm population is classified according to country of birth (in Table 18). Practically all of the colored farm population shown is Negro, except in King County, Wash. For this county the Japanese are shown separately; and of the 133 "Other colored" in the farm population, 65 were Negroes.

AGE.—The classification according to age is also one which needs little explanation. In some of the tables this classification is shown by 5-year age periods up to 60 years of age; in most of the tables, however, a smaller number of age groups is used.

ILLITERACY.—As in the reports of the general census of population, a person is classified as illiterate if he is unable to write (in any language), without regard to ability to read. The percentages of illiteracy are based on the whole number of persons 10 years of age and over.

OTHER GENERAL CLASSIFICATIONS.—The other general classifications employed in the tables are for the most part self-explanatory. These include school attendance, marital condition, birthplace, parentage, relation to family (whether head or other member), year of immigration for the foreign born (Summary Table IX only), and citizenship of the foreign born (Summary Table X only).

OCCUPATIONS.—The occupation statistics relate only to that part of the farm population 10 years of age and over which is engaged in gainful occupations, including, however, not only those who work for actual wages or salaries, but all those who are engaged in productive work of any kind, except women doing housework in their own homes without wages and children at home who merely do chores or assist in the housework or at odd times (not regularly) do some other work. The number of farm operators and farm laborers (members of the farmer's family) working on the home farm without specific wages is, of course, very considerable.

The whole list of occupations is divided into nine major groups, as in the census statistics of occupations for the general population. Agricultural occupations, which form the first group, are subdivided so as to show "Farm operators," "Farm managers," and "Farm laborers," and the farm laborers are again subdivided to show those working on the home farm and those working out on other farms.

The nonagricultural occupations comprise the remaining eight groups, as follows: Mining, manufacturing and mechanical industries, transportation, trade, public service, professional service, domestic and personal service, and clerical occupations.

Where the term "farm laborer" is used in the occupation classification it refers to actual laborers, and careful distinction should be made between the *farm laborers* and the farm laborer population, for the farm laborers (home farm) are found to a considerable extent in the families (households) of the farm owners, where they form a part of the farm owner population; and likewise some are included in the farm tenant population and the farm manager population. In fact, the actual number of farm laborers in the county may be greater than the farm laborer population, as earlier defined, since the latter includes, to offset the number of farm laborers who are members of owner and tenant families, only the members of the families of those farm laborers who have dependent families of their own.

FARM OPERATORS AND FARMS.—The number of farm operators shown in the classification of the farm population by occupation will not agree exactly in any case with the number of farm operators shown in the census of agriculture, for a number of reasons. First, while any person who operated a farm was returned in the census of agriculture as a farm operator, without regard to any other occupation or business which he might have, the population census assigned a person with more than one occupation to that occupation from which he derived the largest income. For example, if a person operated both a farm and a general store, and made the larger income from the store, he would have been returned as a retail merchant and not as a farmer. Second, the farm census recognized only one operator for each farm, so that the relatively small number of farms operated by partnerships were returned in the name of one of the partners, while both partners were reported as farm operators in the occupation census. Third, it is probable that considerable numbers of retired farmers (whose farms were reported by their tenants) were returned as having the occupation of farm operator—this in particular where the retired farmer exercised a considerable degree of supervision over the farming operations. These men would appear mainly among the farm operators living “not on farms,” and it may be noted that if these be deducted the number of farm operators remaining agrees closely in most of the counties with the farm census figures for number of farms (or number of farm operators, which is the same thing). Fourth, so far as concerns the selected counties, there may have been included some farm operators not living on their farms, whose farms were located in other counties.

DESCRIPTION OF TABLES.

SUMMARY TABLES.—The first 12 of the tables presented in the following pages are summary tables, giving data for all of the eight selected counties in convenient form for comparison. Table I, in particular, gives figures for the urban and rural population as well as the farm population and for the United States and the States in which the selected counties are located, as well as for the eight counties themselves. Table III likewise contains figures for the urban and rural population as well as the farm population and furnishes the basis for a comparison of the degree of illiteracy in these different population groups. Tables IX and X present data with regard to year of immigration and citizenship, respectively, of the foreign-born farm population which do not appear in any of the tables for the individual counties. All of the other farm population data in the summary tables are taken from the tables for the individual counties.

DETAILED COUNTY TABLES.—For each of the eight counties there are 30 tables, presenting the farm population figures in detail. The material contained in these tables is clearly indicated by the titles of the tables, as they appear in the Table of Contents. In general, Tables 1 to 6, inclusive, present the data classified by tenure group, residence, race and nativity, and sex, with cross classifications in considerable detail; Tables 7 to 11, inclusive, give the age distribution, in addition to those classifications just mentioned; Tables 12 and 13 are devoted to illiteracy, and Tables 14 and 15 to school attendance, again in combination with the primary classifications of Tables 1 to 6. The new element in Table 16 is marital condition; in Table 17, ownership of homes; in Table 18, birthplace; and in Table 19, parentage and birthplace of father. Tables 20 to 25, inclusive, show the farm population 10 years of age and over by occupation; Tables 26 and 27 present occupation data for women 15 years of age and over; Tables 28 and 29 give occupation figures for children from 10 to 17 years of age; and Table 30 shows the farm laborers alone under various significant classifications.

SUMMARY TABLES FOR THE EIGHT COUNTIES.
